

Day 3 (July 29)

Dear Diary,

I went to Stonehenge. I was surprised at its size. It was about 4 meters high and 100 meters in diameter. Even today, people cannot completely understand how it was constructed. It was also amazing to see such a mysterious structure.

There were some interesting facts reported around the site. For example, it is a masterpiece of engineering built by sophisticated people. The stones are aligned with the movement of the sun. They show the evidence that people could measure accurately and line up those huge stones. Also, the stones were carried from Scotland. The work was carried out without developed technology. I was deeply impressed by that. (K.A.)

Day 3 (July 29)

Today I woke up at 7 o'clock.

I ate breakfast in the morning. I had toast, baked beans, and a croissant.

After that, we went to Stonehenge, and we ate lunch there.

Stonehenge was built around 3000 BC.

It weighs 35 tons.

The stones were carried from places such as Wales and Scotland, 30 to 250 kilometers away.

However, it is not known what it was built for. It remains a mystery.

When I got back, there was a class placement test.

I'm going to Windsor Castle tomorrow.

I'm looking forward to it! (H.R.)
